

Grow Your Own North Carolina Watermelon

1.

The Flower Blossoms

2.

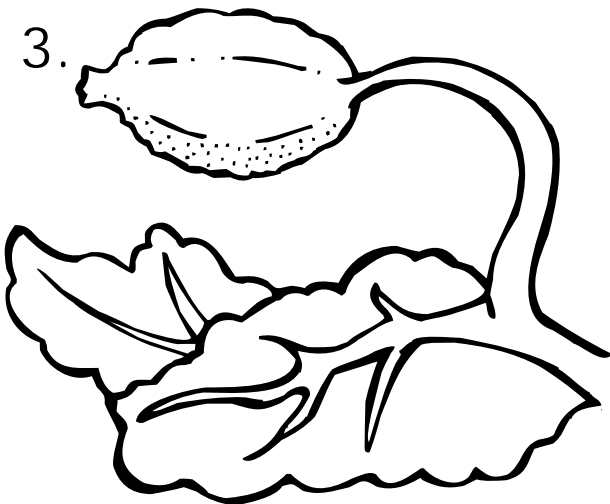

Melon Bud Comes
From Blossom

You can plant your own watermelon seeds right from your own melon slice. Here's how...

Supplies: watermelon seeds, planting pot, water, dirt (enough to fill pot), sunshine

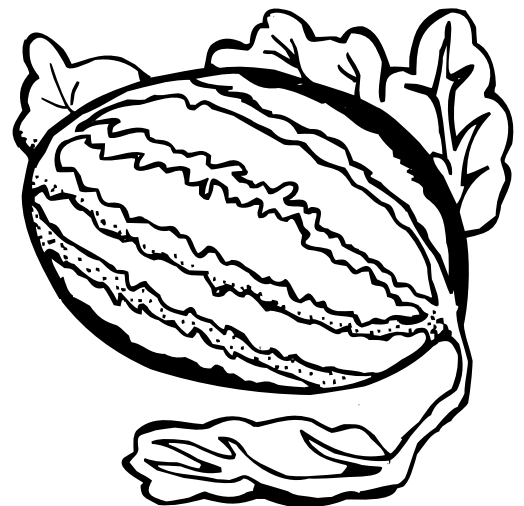

- 1.) Place the seeds about 1 inch deep in dirt in a plant pot. Or, you can plant the seeds outside in dirt where there is a lot of sunshine.
- 2.) Water your seeds right after planting, and then once a week after that.
- 3.) You should notice plants in about 10 days. Weed out the weakest plants.
